

- 2 channels sampled at 8-bit resolution
- 50 MS/s simultaneous real-time sampling rate on each input
- $\pm 20$  mV to  $\pm 20$  V input range
- 256 kilo samples of on-board acquisition memory per channel
- AlazarDSO Oscilloscope Software
- Software Development Kit supports C/C++, C#, Python, MATLAB®, LabVIEW®
- Support for Windows & Linux

Product	Bus	Operating System	Channels	Sampling Rate	Bandwidth	Memory Per Channel	Resolution
ATS850	PCI 32 bit 33 MHz	Windows Linux 32-bit/64-bit	2	50 MS/s to 1 KS/s	25 MHz	256 K	8 bits

### Overview

ATS850 is a dual-channel, 8 bit, 50 MS/s waveform digitizer card for PCI bus, capable of storing up to 256 kilo samples per channel of acquired data in its on-board memory.

It should be noted that it is not possible for ATS850 acquisition memory to be dual-ported. For applications that require dual port memory, consider using ATS860.

For scientific customers who want to record multiple analog inputs simultaneously, ATS850 offers multi-channel data acquisition systems of up to 8 channels.

ATS850 is supplied with AlazarDSO oscilloscope software that lets the user get started immediately without having to write any software.

Users who need to integrate the ATS850 in their own program can purchase a software development kit, ATS-SDK, for C/C++, C#, Python, MATLAB, and LabVIEW for both Windows and Linux operating system.

All of this advanced functionality is packaged in a low power, half-length PCI card available.

### Applications

**Motor Winding Testing**

**Ultrasonic & Eddy Current NDT/NDE**

**Low Cost Oscilloscope**

**Spectroscopy**

**Multi-Channel Transient Recording**

### Analog Input

An ATS850 features two analog input channels with extensive functionality. Each channel has 25 MHz of full power analog input bandwidth. With software selectable attenuation, you can achieve an input voltage range of  $\pm 20$  mV to  $\pm 20$  V. Attenuating probes (sold separately) can extend the voltage range even higher.

Software selectable AC or DC coupling further increases the signal measurement capability. Software selectable 50  $\Omega$  input impedance makes it easy to interface to high speed RF signals.

### Acquisition System

ATS850 PCI digitizers use a pair of 50 MS/s, 8-bit ADCs to digitize the input signals. The real-time sampling rate ranges from 50 MS/s down to 10 KS/s. The two channels are guaranteed to be simultaneous, as they share the exact same clock.

An acquisition can consist of multiple records, with each record being captured as a result of one trigger event. Minimum number of records is 1 and maximum is 1000. A record may contain both pre-trigger and post-trigger data.

In between the multiple records being captured, the acquisition system is re-armed by the hardware within 8 sampling clock cycles. This mode of capture, sometimes referred to as Multiple Record or Pre-Trigger Multiple Record, is very useful for capturing data in applications with a very rapid trigger rate.

Examples of such applications include ultrasonic testing, NMR spectroscopy, motor testing and lightning test.

### On-Board Acquisition Memory

ATS850 PCI digitizer features 256 Kilo samples of acquisition memory for each channel.

Data is acquired into the onboard memory before being transferred to the host PC memory. This transfer is performed using Direct Memory Access (DMA), which uses scatter-gather bus mastering technology.

### Triggering

The ATS850 is equipped with sophisticated digital triggering options, such as programmable trigger thresholds and slope on any of the input channels or the External Trigger input.

While most oscilloscopes offer only one trigger engine, ATS850 offers two trigger engines (called Engines X and Y). This allows the user to combine the two engines using a logical OR, AND or XOR operand.

The user can specify the number of records to capture in an acquisition, the length of each record and the amount of pre-trigger data.

A programmable trigger delay can also be set by the user. This is very useful for capturing the signal of interest in a pulse-echo application, such as ultrasound, radar, lidar etc.

### Trigger Time Stamp

A 40-bit time stamp counter comes standard with the ATS850. By default, this counter is initialized to a zero value when an acquisition session is started and increments once for every two samples captured, thus providing a 4-clock timing accuracy. At 50 MS/s sample rate, this counter will not roll over for well over 2 hours.

The value of this counter is latched into trigger memory for each trigger, i.e. once per record, for up to specified number of records.

This allows the user to find out the timing of each trigger in a multiple record acquisition relative to the start of the acquisition.

It is also possible to configure the timestamp counter to reset for the first acquisition only and never again, until a software reset is issued. This feature enables users to obtain precise timing information about multiple acquisitions.

### Multiple-Digitizer Synchronization

ATS850 features a Master/Slave connector that allows synchronization of multiple digitizers to allow truly synchronous sampling across as many as 16 channels.

A SyncBoard 850 (sold separately) is required to connect the Master/Slave connectors on multiple digitizers in the system together. Such a system is called a Master/Slave system.

SyncBoard 850 is available for 2 board synchronization or 4 board synchronization.

SyncBoard is a board-level product that features controlled impedance, equal length traces to deliver clock, trigger and initialization signals to each ATS850 in the system.

# ATS850

## 50 MS/s 8-Bit PCI Digitizer

A Master/Slave system is guaranteed to sample simultaneously across all channels in that system. Triggering is also guaranteed to be simultaneous across all digitizers in the system.

### Optional External Clock

While the ATS850 features a low jitter, high reliability 50 MHz crystal oscillator as the source of the timebase system, there may be occasions when digitizing has to be synchronized to an external clock source.

ATS850 External Clock option provides a BNC input for a TTL compatible external clock signal with a frequency between 50 MHz and 1 MHz.

This clock signal is terminated on the ATS850 printed circuit board using a 50  $\Omega$  resistor. As such, the external clock circuitry must have sufficient drive ( $\pm 66$  mA) to inject the clock signal properly.

The active edge of the external clock is software selectable between the rising or falling edge.

Users can also set a decimation factor for the external clock. For example, if the user wants to digitize the input signal on every tenth clock edge, this factor can be set to 10. Minimum decimation value is 1 and maximum is 100,000.

### Optional Trigger Output

ATS850 can be optionally equipped with a Trigger Output capability. This option uses the ECLK BNC connector to output a TTL signal synchronous to the ATS850 Trigger signal, allowing users to synchronize their test systems to the ATS850 Trigger.

When combined with the Trigger Delay feature of the ATS850, this option is ideal for ultrasonic and other pulse-echo imaging applications.

Customers who want both External Clock and Trigger Output options on their ATS850 digitizers should contact the factory for arriving at an appropriate cabling solution.

### Calibration

Every ATS850 digitizer is factory calibrated for gain and offset accuracy to NIST- or CNRC-traceable standards, using a Fluke 5820A oscilloscope calibrator. To recalibrate an ATS850, the digitizer must either be shipped back to the factory or a qualified metrology laboratory.

### RoHS Compliance

ATS850 units built after June 2007 are fully RoHS compliant, as defined by Directive 2011/65/EU (RoHS 2) of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

All manufacturing is done using RoHS-compliant components and lead-free soldering.

### AlazarDSO Software

ATS850 is supplied with the powerful AlazarDSO software that allows the user to setup the acquisition hardware and capture, display and archive the signals.

The Stream-To-Memory command in AlazarDSO allows users to stream a large dataset to motherboard memory.

AlazarDSO software also includes powerful tools for benchmarking the computer bus and disk drive.

### Software Development Kits

AlazarTech provides easy to use software development kits for customers who want to integrate the ATS850 into their own software.

A Windows and Linux compatible software development kit, called ATS-SDK, includes headers, libraries and source code sample programs written in C/C++, C#, Python, MATLAB, and LabVIEW. These programs can fully control the ATS850 and acquire data in user buffers.

### Linux Support

AlazarTech offers ATS850 binary drivers for most of the popular Linux distributions, such as CentOS, Ubuntu,...

Users can download the binary driver for their specific distribution by choosing from the available drivers here:

<ftp://release@ftp.alazartech.com/outgoing/linux>

Also provided is a GUI application called AlazarFront-Panel that allows simple data acquisition and display.

ATS-SDK includes source code example programs for Linux, which demonstrate how to acquire data programmatically using a C compiler.

If customers want to use ATS850 in any Linux distribution other than the one listed above, they can have the AlazarTech engineering team generate an appropriate driver for a nominal fee, if applicable.

Based on a minimum annual business commitment, the Linux driver source code license (order number ATS850-LINUX) may be granted to qualified OEM customers for a fee. For release of driver source code, a Non-Disclosure Agreement must be executed between the customer's organization and AlazarTech.

All such source code disclosures are made on an as-is basis with limited support from the factory.

### Export Control Classification

According to the Export Controls Division of Government of Canada, ATS850 is currently not controlled for export from Canada. Its export control classification is N8, which is equivalent to ECCN EAR99. ATS850 can be shipped freely outside of Canada, with the exception of

# ATS850

## 50 MS/s 8-Bit PCI Digitizer

---

countries listed on the [Area Control List](#) and [Sanctions List](#). Furthermore, if the end-use of ATS850, in part or in its entirety, is related to the development or deployment of weapons of mass destruction, AlazarTech is obliged to apply for an export permit.

### EC Conformity

ATS850 conforms to the following standards:

Electromagnetic Emissions:

CISPR 22:2006/EN 55022:2006 (Class A):  
Information Technology Equipment (ITE). Radio disturbance characteristics. Limits and method of measurement.

Electromagnetic Immunity:

CISPR 24:1997/EN 55024:1998 (+A1 +A2):  
Information Technology Equipment Immunity characteristics — Limits and methods of measurement.

Safety:

IEC 60950-1:2005: Information technology equipment — Safety — Part 1: General requirements.

IEC 60950-1:2006: Information technology equipment — Safety — Part 1: General requirements.

ATS850 also follows the provisions of the following directives: 2006/95/EC (Low Voltage Equipment); 2004/108/EC (Electromagnetic Compatibility).

### FCC & ICES-003 Compliance

ATS850 has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15, subpart B of the FCC Rules, and the Canadian Interference-Causing Equipment Standard ICES-003:2004.

# ATS850

## 50 MS/s 8-Bit PCI Digitizer

### System Requirements

Personal computer with at least one free PCI slot, 512 MB RAM, 100 MB of free hard disk space

### Power Requirements

+5 V 1.5 A, typical for ATS850-256K  
 +5V voltage level must remain between the range of 4.75 V to 5.20 V at all times after power-on

### Physical

Size Single slot, half length PCI card (4.225 inches x 7.7 inches excluding the connectors protruding from the front panel)  
 Weight 500 g

### I/O Connectors

CH A, CH B, EXT, ECLK BNC female connectors

### Environmental

Operating temperature 0 to 55 degrees Celsius  
 Storage temperature -20 to 70 degrees Celsius  
 Relative humidity 5 to 95%, non-condensing

### Acquisition System

Resolution 8 bits  
 Bandwidth (-3 dB)  
   DC-coupled, 1 M $\Omega$  DC - 25 MHz  
   DC-coupled, 50  $\Omega$  DC - 25 MHz  
   AC-coupled, 1 M $\Omega$  10 Hz - 25 MHz  
   AC-coupled, 50  $\Omega$  100 kHz - 25 MHz  
 Bandwidth flatness:  $\pm 1$  dB  
 Number of channels 2, simultaneously sampled  
 Maximum Sample Rate 50 MS/s single shot  
 Minimum Sample Rate 1 KS/s single shot for internal clocking  
 Full Scale Input ranges  
   1 M $\Omega$  input impedance:  $\pm 20$  mV,  $\pm 40$  mV,  $\pm 50$  mV,  $\pm 80$  mV,  $\pm 100$  mV,  $\pm 200$  mV,  $\pm 400$  mV,  $\pm 500$  mV,  $\pm 800$  mV,  $\pm 1$  V,  $\pm 2$  V,  $\pm 4$  V,  $\pm 5$  V,  $\pm 8$  V, and  $\pm 10$  V, software selectable  
   50  $\Omega$  input impedance:  $\pm 40$  mV,  $\pm 50$  mV,  $\pm 80$  mV,  $\pm 100$  mV,  $\pm 200$  mV,  $\pm 400$  mV,  $\pm 500$  mV,  $\pm 800$  mV,  $\pm 1$  V,  $\pm 2$  V, and  $\pm 4$  V, software selectable  
 DC accuracy  $\pm 2\%$  of full scale in all input ranges  
 Input coupling AC or DC, software selectable  
 Input impedance 50  $\Omega$  or 1 M $\Omega$   $\pm 1\%$  in parallel with 50 pF  $\pm 10$  pF, software selectable  
 Input protection  
   1 M $\Omega$   $\pm 28$  V (DC + peak AC for CH A, CH B and EXT only without external attenuation)  
   50  $\Omega$   $\pm 4$  V (DC + peak AC for CH A, CH B and EXT only without external attenuation)

### On-Board Acquisition Memory System

Onboard acq memory 512 Kilobytes for ATS850-256K  
 Acquisition Memory/ch Up to 256,000 samples per channel for ATS850-256K  
 Record Length Software selectable with 16 point resolution. Record length must be a minimum of 256 points. Maximum record length is limited by the acquisition memory per channel.  
 Number of Records Software selectable from a minimum of 1 to a maximum of 1000 or (Acquisition Memory Per Channel / (Record Length+4)), whichever is lower  
 Pre-trigger depth 0 to (Record Length-64), software selectable with 16 point resolution  
 Post-trigger depth Record Length - Pre-trigger depth

### Timebase System

Timebase options Internal Clock or External Clock (Optional)  
 Internal Sample Rates 50 MS/s, 25 MS/s, 10 MS/s, 5 MS/s, 2 MS/s, 1 MS/s, 500 KS/s, 200 KS/s, 100 KS/s, 50 KS/s, 20 KS/s, 10 KS/s, 5 KS/s, 2 KS/s, 1 KS/s  
 Internal Clock accuracy  $\pm 25$  ppm

### Dynamic Parameters

Typical values measured using a randomly selected ATS850 in  $\pm 1$  V input range, DC coupling and 50  $\Omega$  impedance. Input was provided by a HP8656A signal generator, followed by a 9-pole, 1 MHz band-pass filter. Input frequency was set at 1 MHz and amplitude was 650 mV rms (92% of full scale input).

SNR 42 dB  
 SINAD 40 dB  
 THD -46 dB  
 SFDR -45 dB

Note that these dynamic parameters may vary from one unit to another, with input frequency and with the full scale input range selected.

### Optional ECLK (External Clock) Input

Signal Level TTL levels. Compatible with both 3.3 V and 5V TTL  
 Input impedance 50  $\Omega$   
 Input current requirement  $\pm 66$  mA  
 Maximum frequency 50 MHz with 50%  $\pm 5\%$  duty cycle  
 Minimum frequency 10 kHz with 50%  $\pm 5\%$  duty cycle  
 Decimation factor Software selectable from 1 to 100,000  
 Sampling Edge Rising or Falling, software selectable

# ATS850

## 50 MS/s 8-Bit PCI Digitizer

### Triggering System

Mode	Edge triggering with hysteresis
Comparator Type	Digital comparators for internal (CH A, CH B) triggering and analog comparators for TRIG IN (External) triggering
Number of Trigger Engines	2
Trigger Engine Combination	OR, AND, XOR, selectable
Trigger Engine Source	CH A, CH B, EXT, Software or None, independently software selectable for each of the two Trigger Engines
Hysteresis	±5% of full scale input, typical
Trigger sensitivity	±10% of full scale input range. This implies that the trigger system may not trigger reliably if the input has an amplitude less than ±10% of full scale input range selected
Trigger level accuracy	±5%, typical, of full scale input range of the selected trigger source
Bandwidth	25 MHz
Trigger Delay	Software selectable from 0 to 9,999,999 sampling clock cycles
Trigger Timeout	Software selectable with a 10 µs resolution. Maximum settable value is 3,600 seconds. Can also be disabled to wait indefinitely for a trigger event

### External Trigger Input

Input impedance	1 MΩ ±10% in parallel with 30 pF ±10 pF
Bandwidth (-3 dB)	
DC-coupled	DC - 25 MHz
AC-coupled	10 Hz - 25 MHz
Input range	±5 V or ±1 V, software selectable
DC accuracy	±10% of full scale input
Input protection	±28 V (DC + peak AC without external attenuation)
Coupling	AC or DC, software selectable

### Materials Supplied

- ATS850 PCI Card
- ATS850 Installation Disk (on USB Flash Drive)

### Certification and Compliances

- RoHS 2 (Directive 2011/65/EU) Compliance
- CE Marking — EC Conformity
- FCC Part 15 Class A / ICES-003 Class A Compliance

*All specifications are subject to change without notice*

### DATASHEET REVISION HISTORY

#### Changes from version 1.3B (Sept 2017) to version 1.3C

	Section, Page
Added CNRC as calibration standard	Calibration, pg. 3
Corrected size of card	Physical, pg. 5
Updated email address	Manufactured By, pg. 6

#### Changes from version 1.3A (Jan 2013) to version 1.3B

	Section, Page
Added Python to list of SDK supported languages, and Support for Windows & Linux	Features, pg. 1
Changed maximum number of channels for multi-channel data acquisition systems to 8	Overview, pg. 1
Removed note on availability of special order item for higher channel counts	Overview, pg. 1
Added Python & LabVIEW to list of supported languages for ATS-SDK, removed ATS-VI	Overview, pg. 1
Corrected maximum number of channels, 8 board synchronization deprecated	Multiple-Digitizer Synchronization, pg. 2
Added list of available SyncBoards	Multiple-Digitizer Synchronization, pg. 2
Updated section on RoHS compliance	RoHS Compliance, pg. 3
Modified AlazarDSO description	AlazarDSO Software, pg. 3
Removed section <i>AlazarDSO Plug-Ins</i> ; product deprecated	AlazarDSO Plug-Ins, pg. 3
New section <i>Software Development Kits</i> to replace sections: <i>ATS-SDK Software Development Kit</i> and <i>ATS-VI Software Development Kit</i>	Software Development Kits, pg. 3
Replaced section <i>ATS-Linux</i> with new <i>Linux Support</i> section	Linux Support, pg. 3
Added Export Control Classification information	Export Control Classification, pg. 3
Added section on EC Conformity	EC Conformity, pg. 4
Added section on FCC & ICES-003 Compliance	FCC & ICES-003 Compliance, pg. 4
Updated External Trigger Input Impedance to 1 M $\Omega$ $\pm$ 10%	TRIG IN (External Trigger) Input, pg. 6
Updated list of Certification and Compliances	Certification and Compliances, pg. 6
Added product ATS850-061	Ordering Information, pg. 6
Updated ATS-SDK product name	Ordering Information, pg. 6
Removed product ATS-VI (ATS-SDK now supports LabVIEW)	Ordering Information, pg. 6
Removed products ATS850-005, ATS850-008, ATS850-Linux, ATS-DSO-PDK	Ordering Information, pg. 6
