

- 1.6 GB/s PCI Express (8-lane) interface
- 2 channels sampled at 8-bit resolution
- 1 GS/s simultaneous real-time sampling rate on each input
- Up to 4 Gigabyte dual-port memory
- Continuous streaming mode
- ± 200 mV to ± 4 V input range
- Asynchronous DMA device driver
- AlazarDSO[®] oscilloscope software
- Software Development Kit supports C/C++, C#, Python, MATLAB[®], and LabVIEW[®]
- Support for Windows[®] & Linux[®]

| Product | Bus | Operating System | Channels | Sampling Rate | Bandwidth | Memory Per Channel | Resolution |
|---------|---------|--------------------------------------|----------|------------------|-----------|-----------------------------------|------------|
| ATS9870 | PCIe x8 | 32-bit/64-bit Windows & 64-bit Linux | 2 | 1 GS/s to 1 KS/s | 450 MHz | Up to 4 GB in single channel mode | 8 bits |

Overview

AlazarTech ATS[®]9870 is an 8-lane PCI Express (PCIe x8), dual-channel, high speed, 8 bit, 1 GS/s waveform digitizer card capable of streaming acquired data to PC memory at rates up to 1.6 GB/s or storing it in its deep on-board dual-port acquisition memory buffer of up to 4 Gigabytes.

Users can capture data from one trigger or a burst of triggers. Users can also stream very large datasets continuously to PC memory or hard disk.

ATS9870 allows users to build real-time data acquisition systems even under the Windows or Linux operating systems, as users are allowed to read acquired data even while the next acquisition is in progress.

ATS9870 PCI Express digitizers are an ideal solution for cost sensitive OEM applications that require a digitizer to be embedded into the customer's equipment.

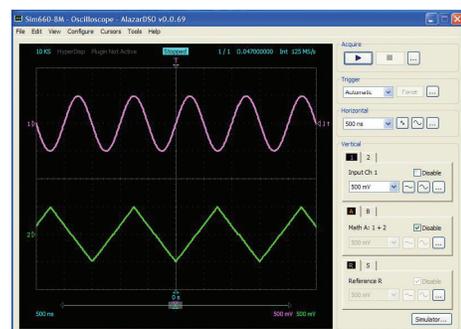

ATS9870 is supplied with AlazarDSO software that lets the user get started immediately without having to go through a software development process.

Users who need to integrate the ATS9870 in their own program can purchase a software development kit, ATS-SDK, for C/C++, C#, Python, MATLAB, and LabVIEW for both Windows and Linux operating systems.

All of this advanced functionality is packaged in a low power, half-length PCI Express card.

Applications

- Ultrasonic & Eddy Current NDT/NDE
- Radar/RF Signal Recording
- Terabyte Storage Oscilloscope
- High Resolution Oscilloscope
- Lidar
- Spectroscopy
- Multi-Channel Transient Recording

ATS9870

1 GS/s 8-Bit PCI Express Digitizer

PCI Express Bus Interface

ATS9870 interfaces to the host computer using an 8-lane PCI Express (Gen 1) bus. ATS9870 is also fully compatible with PCIe Gen 2 and Gen 3.

According to PCIe specification, an 8-lane board can be plugged into any 8-lane or 16-lane slot, but not into a 4-lane or 1-lane slot. As such, ATS9870 requires at least one free 8-lane or 16-lane slot on the motherboard.

The physical and logical PCIe x8 interface is provided by an on-board FPGA, which also integrates acquisition control functions, memory management functions and acquisition datapath. This very high degree of integration maximizes product reliability.

PCI Express throughput performance may vary from motherboard to motherboard. The AlazarTech® 1.6 GB/s benchmark was done using ASUS P6T7 and P9X79 Pro motherboards.

Other motherboards, such as Intel S5000PSL and various Dell and HP workstations, produced similar results.

Users must always be wary of throughput specifications from manufacturers of waveform digitizers. Some unscrupulous manufacturers tend to specify the raw, burst-mode throughput of the bus.

AlazarTech, on the other hand, specifies the benchmarked sustained throughput. To achieve such high throughput, a great deal of proprietary memory management logic and kernel mode drivers have been designed.

Analog Input

An ATS9870 features two analog input channels with extensive functionality. Each channel has 450 MHz of full power analog input bandwidth.

With software selectable attenuation, you can achieve an input voltage range of ± 200 mV to ± 4 V.

It must be noted that input impedance of both channels is fixed at 50 Ω . Software selectable AC or DC coupling further increases the signal measurement capability.

Acquisition System

ATS9870 PCI Express digitizers use a state of the art dual 1 GSPS, 8-bit ADC to digitize the input signals. The real-time sampling rate ranges from 1 GS/s down to 1 KS/s. The two channels are guaranteed to be simultaneous, as they share the exact same clock.

An acquisition can consist of multiple records, with each record being captured as a result of one trigger event. A record can contain both pre-trigger and post-trigger data.

Infinite number of triggers can be captured by ATS9870, when it is operating using dual-port memory.

In between the multiple triggers being captured, the acquisition system is re-armed by the hardware within 64 sampling clock cycles.

This mode of capture, sometimes referred to as Multiple Record, is very useful for capturing data in applications with a very rapid or unpredictable trigger rate. Examples of such applications include medical imaging, ultrasonic testing, OCT and NMR spectroscopy.

On-Board Acquisition Memory

ATS9870 supports on-board memory buffers of 256 Megabytes, 2 Gigabytes and 4 Gigabytes.

Acquisition memory can either be divided equally between the two input channels or devoted entirely to one of the channels.

There are two distinct advantages of having on-board memory:

First, a snapshot of the ADC data can be stored into this acquisition memory at full acquisition speed of 2 Gigabytes per second.

Second, and more importantly, on-board memory can also act as a very deep FIFO between the Analog to Digital converters and PCI Express bus, allowing very fast sustained data transfers across the bus, even if the operating system or another motherboard resource temporarily interrupts DMA transfers.

Maximum Sustained Transfer Rate

PCI Express support on different motherboards is not always the same, resulting in significantly different sustained data transfer rates. The reasons behind these differences are complex and varied and will not be discussed here.

ATS9870 users can quickly determine the maximum sustained transfer rate for their motherboard by inserting their card in a PCIe slot and running the Tools: Benchmark: Bus tool provided in AlazarDSO software.

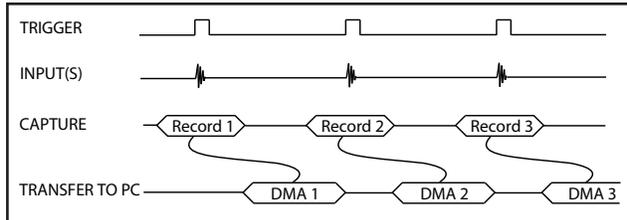

ATS9870, which is equipped with dual-port on-board memory, will be able to achieve this maximum sustained transfer rate.

Recommended Motherboards or PCs

Many different types of motherboards and PCs have been benchmarked by AlazarTech. The ones that have produced the best throughput results (as high as 1.7 GB/s for PCIe Gen1) are listed here: www.alazartech.com/images-media/2246-AlazarTechRecommendedMotherboards.pdf.

Traditional AutoDMA

In order to acquire both pre-trigger and post-trigger data in a dual-ported memory environment, users can use Traditional AutoDMA.

Data is returned to the user in buffers, where each buffer can contain from 1 to 8192 records (triggers). This number is called RecordsPerBuffer.

Users can also specify that each record should come with its own header that contains a 40-bit trigger timestamp.

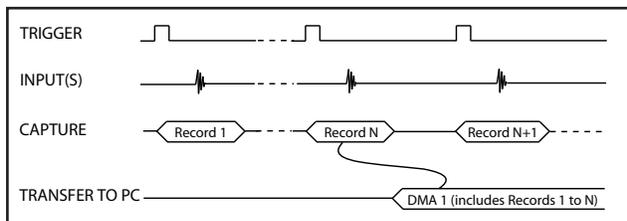

A BUFFER_OVERFLOW flag is asserted if more than 512 buffers have been acquired by the acquisition system, but not transferred to host PC memory by the AutoDMA engine.

While Traditional AutoDMA can acquire data to PC host memory at the maximum sustained transfer rate of the motherboard, a BUFFER_OVERFLOW can occur if more than 512 triggers occur in very rapid succession, even if all the on-board memory has not been used up.

No Pre-Trigger (NPT) AutoDMA

Many ultrasonic scanning and medical imaging applications do not need any pre-trigger data: only post-trigger data is sufficient.

NPT AutoDMA is designed specifically for these applications. By only storing post-trigger data, the memory bandwidth is optimized and the entire on-board memory acts like a very deep FIFO.

Note that a DMA is not started until RecordsPerBuffer number of records (triggers) have been acquired.

NPT AutoDMA buffers do not include headers. However, users can specify that each record should come with its own footer that contains a 40-bit trigger timestamp. The footer is called NPT Footer.

More importantly, a BUFFER_OVERFLOW flag is asserted only if the entire on-board memory is used up. This provides a very substantial improvement over Traditional AutoDMA.

NPT AutoDMA can easily acquire data to PC host memory at the maximum sustained transfer rate of the motherboard without causing an overflow.

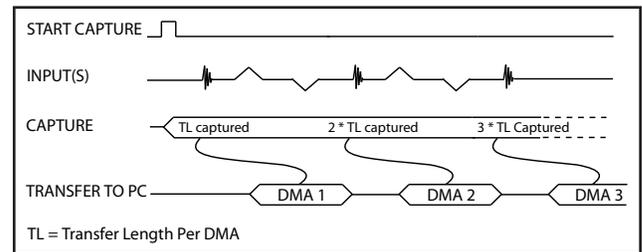

This is the recommended mode of operation for most

ultrasonic scanning, OCT and medical imaging applications.

Continuous AutoDMA

Continuous AutoDMA is also known as the data streaming mode.

In this mode, data starts streaming across the PCI bus as soon as the ATS9870 is armed for acquisition. It is important to note that triggering is disabled in this mode.

Continuous AutoDMA buffers do not include headers, so it is not possible to get trigger time-stamps.

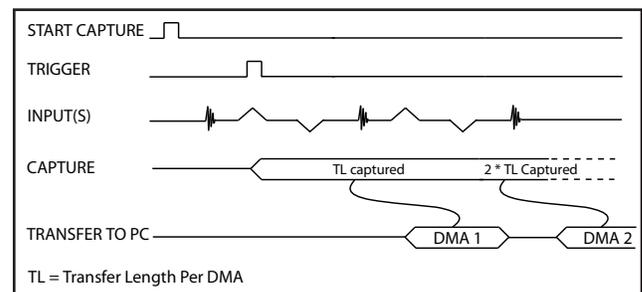

A BUFFER_OVERFLOW flag is asserted only if the entire on-board memory is used up.

The amount of data to be captured is controlled by counting the number of buffers acquired. Acquisition is stopped by an AbortCapture command.

Continuous AutoDMA can easily acquire data to PC host memory at the maximum sustained transfer rate of the motherboard without causing an overflow. This is the recommended mode for very long signal recording.

Triggered Streaming AutoDMA

Triggered Streaming AutoDMA is virtually the same as Continuous mode, except the data transfer across the bus is held off until a trigger event has been detected.

Triggered Streaming AutoDMA buffers do not include headers, so it is not possible to get trigger time-stamps.

A BUFFER_OVERFLOW flag is asserted only if the entire on-board memory is used up.

As in Continuous mode, the amount of data to be captured is controlled by counting the number of buffers acquired. Acquisition is stopped by an AbortCapture command.

Triggered Streaming AutoDMA can easily acquire data to PC host memory at the maximum sustained transfer rate of the motherboard without causing an overflow. This is the recommended mode for RF signal recording that has to be started at a specific time, e.g. based on a GPS pulse.

Asynchronous DMA Driver

The various AutoDMA schemes discussed above provide hardware support for optimal data transfer. However, a corresponding high performance software mechanism is also required to make sure sustained data transfer can be achieved.

This proprietary software mechanism is called Async DMA (short for Asynchronous DMA).

A number of data buffers are posted by the application software. Once a data buffer is filled, i.e. a DMA has been completed, ATS9870 hardware generates an interrupt, causing an event message to be sent to the application so it can start consuming data. Once the data has been consumed, the application can post the data buffer back on the queue. This can go on indefinitely.

One of the great advantages of Async DMA is that almost 95% of CPU cycles are available for data processing, as all DMA arming is done on an event-driven basis.

To the best of our knowledge, no other supplier of waveform digitizers provides asynchronous software drivers. Their synchronous drivers force the CPU to manage data acquisition, thereby slowing down the overall data acquisition process.

Triggering

The ATS9870 is equipped with sophisticated digital triggering options, such as programmable trigger thresholds and slope on any of the input channels or the External Trigger input.

While most oscilloscopes offer only one trigger engine, ATS9870 offers two trigger engines (called Engines J and K).

The user can specify the number of records to capture in an acquisition, the length of each record and the amount of pre-trigger data.

A programmable trigger delay can also be set by the user. This is very useful for capturing the signal of interest in a pulse-echo application, such as ultrasound, radar, lidar etc.

External Trigger Input

The external trigger input on the ATS9870 is labeled TRIG IN on the face plate.

By default, the input impedance of this input is 50 Ω and the full scale input range is +/- 5 Volts. The trigger signal is treated as an analog signal in this situation and a high-speed comparator receives the signal.

Timebase

Timebase on the ATS9870 can be controlled either by on-board low-jitter VCO or by optional External Clock. On-board low-jitter VCO uses an on-board 10 MHz TCXO as a reference clock.

Master/Slave Systems

Users can create a multi-board Master/Slave system by synchronizing up to four ATS9870 boards using an appropriate SyncBoard-9870. Note that ATS9870 board must be hardware version 1.3 or higher.

SyncBoard-9870 is a mezzanine board that connects to the Master/Slave connector along the top edge of the ATS9870 and sits parallel to the motherboard. For additional robustness, users can secure the SyncBoard-9870 to a bracket mounted on each of the ATS9870 boards.

SyncBoard-9870 is available in different widths: 2x, 4x, 2x-W, 3x-W or 4x-W.

SyncBoards with the -W suffix provide 2-slot spacing between ATS9870 cards to support some of the newer motherboards that space out the on-board x8 or x16 slots by two slots. The -W SyncBoards are also a better solution from thermal point of view, as there is better air flow with 2-slot spacing.

The 2x and 2x-W models allow a 2-board Master/Slave system; the 3x-W model allows a 2 or 3-slot Master/Slave system; and the 4x and 4x-W models allow 2, 3 or 4 board Master/Slave systems.

The Master board's clock and trigger signals are copied by the SyncBoard-9870 and supplied to all the Slave boards. This guarantees complete synchronization between the Master board and all Slave boards.

It should be noted that SyncBoard-9870 does not use a PLL-based clock buffer, allowing the use of variable frequency clocks in Master/Slave configuration.

A Master/Slave system samples all inputs simultaneously and also triggers simultaneously on the same clock edge.

Optional External Clock

While the ATS9870 features low jitter VCO and a 10 MHz TCXO as the source of the timebase system, there may be occasions when digitizing has to be synchronized to an external clock source.

ATS9870 External Clock option provides an SMA input for an external clock signal, which can be a sine wave or LVTTTL signal.

Input impedance for the External Clock input is fixed at 50 Ω . External clock input is always AC-coupled.

There are three types of External Clock supported by ATS9870. These are described below.

Fast External Clock

A new sample is taken by the on-board ADCs for each rising (or falling) edge of this External Clock signal. In order to satisfy the clocking requirements of the ADC chips being used, Fast External Clock frequency must always be higher than 200 MHz and lower than 1 GHz.

Slow External Clock

This type of clock should be used when the clock frequency is either too slow or is a burst-type clock. Both these types of clock do not satisfy the minimum clock requirements listed above for Fast External Clock.

In this mode, the ATS9870 ADCs are run at a preset internal clock frequency. The user-supplied Slow External Clock signal is then monitored for low-to-high transitions. Each time there is such a transition, a new sample is stored into the on-board memory.

It should be noted that there can be a 0 to +8 ns sampling jitter when Slow External Clock is being used, as the internal ADC clock is not synchronized to the user-supplied clock.

Slow External Clock: $f_{EXT} < 60 \text{ MHz}$

10 MHz Reference Clock

It is possible to generate the sampling clock based on an external 10 MHz reference input. This is useful for RF systems that use a common 10 MHz reference clock.

ATS9870 uses an on-board low-jitter VCO to generate the 1 GHz high frequency clock used by the ADC.

AUX Connector

ATS9870 provides an AUX (Auxiliary) BNC connector that is configured as a Trigger Output connector by default.

When configured as a Trigger Output, AUX BNC connector outputs a 5 Volt TTL signal synchronous to the ATS9870 Trigger signal, allowing users to synchronize their test systems to the ATS9870 Trigger. Note that the Trigger output is synchronized to a divide-by-8 clock (dual channel mode) or divide-by-16 clock (single channel mode).

When combined with the Trigger Delay feature of the ATS9870, this option is ideal for ultrasonic and other pulse-echo imaging applications.

AUX connector can also be used as a Trigger Enable Input and Clock Output.

Real Time Signal Processing

One of the unique features of AlazarTech's waveform digitizer product line is that acquired data is available for real-time signal processing by the host CPU.

What makes this very powerful is the fact that most modern CPUs have multiple cores, which can be used to do real-time signal processing using parallel processing principles.

If your algorithm can be written to take advantage of parallel processing, this may be a very cost-effective solution for signal processing applications.

AlazarTech has been able to demonstrate that a 2.4 GHz, quad-core CPU can do real-time averaging of acquired data at 1.5 GB/s while using up only 25% of CPU cycles. A faster CPU or a CPU with more cores can do signal processing even faster.

Another very popular application is to monitor a pulse train for particle detection applications. AlazarTech has created a parallel processing algorithm that allows real time pulse detection and characterization at rates in excess of 1 GB/s.

Calibration

Every ATS9870 digitizer is factory calibrated to NIST- or CNRC-traceable standards. To recalibrate an ATS9870, the digitizer must either be shipped back to the factory or a qualified metrology lab.

AlazarDSO Software

ATS9870 is supplied with the powerful AlazarDSO software that allows the user to setup the acquisition hardware and capture, display and archive the signals.

The Stream-To-Memory command in AlazarDSO allows users to stream a large dataset to motherboard memory.

AlazarDSO software also includes powerful tools for benchmarking the computer bus and disk drive.

Software Development Kits

AlazarTech provides easy to use software development kits for customers who want to integrate the ATS9870 into their own software.

A Windows and Linux compatible software development kit, called ATS-SDK, includes headers, libraries and source code sample programs written in C/C++, C#, Python, MATLAB, and LabVIEW. These programs can fully control the ATS9870 and acquire data in user buffers.

The purchase of an ATS-SDK license includes a subscription that provides the following benefits for a period of 12 months from the date of purchase:

- Download ATS-SDK updates from the AlazarTech website;
- Receive technical support on ATS-SDK.

Customers who want to receive technical support and download new releases beyond this 12 month period should purchase extended support and maintenance (order number ATS-SDK-1YR).

ATS9870

1 GS/s 8-Bit PCI Express Digitizer

ATS-GPU

ATS-GPU is a software library developed by AlazarTech to allow users to do real-time data transfer from ATS9870 to a GPU card at rates up to 1.6 GB/s.

Modern GPUs include very powerful processing units and a very high speed graphical memory bus. This combination makes them perfectly suited for signal processing applications.

ATS-GPU-BASE is supplied with an example user application in source code. The application includes GPU kernels that use ATS-GPU to receive data, do very simple signal processing (data inversion), and copy the processed (inverted) data back to a user buffer. All this is done at the highest possible data transfer rate.

Programmers can replace the data inversion code with application-specific signal processing kernels to develop custom applications.

ATS-GPU-OCT is the optional OCT Signal Processing library for ATS-GPU. It contains floating point FFT routines that have also been optimized to provide the maximum number of FFTs per second. Kernel code running on the GPU can do zero-padding, apply a windowing function, do a floating point FFT, calculate the amplitude and convert the result to a log scale. It is also possible to output phase information.

FFTs can be done on triggered data or on continuous gapless stream of data. It is also possible to do spectral averaging. Our benchmarks showed that it was possible to do 400,000 FFTs per second when capturing data in single-channel mode and using a NVIDIA GeForce GTX Titan X GPU.

ATS-GPU supports 64-bit Windows and 64-bit Linux for CUDA®-based development.

ATS-GMA

ATS-GMA is a software library developed by AlazarTech that allows users to DMA data from ATS9870 to an AMD Radeon™ Pro GPU card at full bus speed, with a latency as low as 100 μs. ATS-GMA does not use any host memory buffers for temporary storage.

ATS-GMA-BASE is supplied with an example user application in source code. The application includes GPU kernels that use ATS-GMA to receive data, do very simple signal processing (data inversion), and, if required, copy the processed (inverted) data to a user buffer. All this is done at the highest possible data transfer rate.

Programmers can replace the data inversion code with application-specific signal processing kernels to develop custom applications.

ATS-GMA-OCT is the optional OCT Signal Processing library for ATS-GMA. It contains floating point FFT routines that have also been optimized to provide the

maximum number of FFTs per second. Kernel code running on the GPU can do zero-padding, apply a windowing function, do a floating point FFT, calculate the amplitude and convert the result to a log scale. It is also possible to output phase information.

ATS-GMA supports 64-bit Windows 7 and 64-bit Windows 10 for OpenCL™-based development.

Support for Windows

Windows support for ATS9870 includes Windows 7, Windows 8.x, Windows 10, Windows Server 2008 R2, Windows Server 2010 and Windows Server 2013.

Due to lack of demand and due to the fact that Microsoft no longer supports these operating systems, AlazarTech no longer supports Windows XP, Windows Vista, and Windows Server 2008.

Linux Support

AlazarTech offers ATS9870 binary drivers for most of the popular Linux distributions, such as CentOS, Ubuntu,...

Users can download the binary driver for their specific distribution by choosing from the available drivers here:

<ftp://release@ftp.alazartech.com/outgoing/linux>

Also provided is a GUI application called AlazarFront-Panel that allows simple data acquisition and display.

ATS-SDK includes source code example programs for Linux, which demonstrate how to acquire data programmatically using a C compiler.

If customers want to use ATS9870 in any Linux distribution other than the one listed above, they can have the AlazarTech engineering team generate an appropriate driver for a nominal fee.

Based on a minimum annual business commitment, the Linux driver source code license (order number ATS9870-LINUX) may be granted to qualified OEM customers for a fee. For release of driver source code, a Non-Disclosure Agreement must be executed between the customer's organization and AlazarTech.

All such source code disclosures are made on an as-is basis with limited support from the factory.

Export Control Classification

According to the Export Controls Division of Government of Canada, ATS9870 is currently not controlled for export from Canada. Its export control classification is N8, which is equivalent to ECCN EAR99. ATS9870 can be shipped freely outside of Canada, with the exception of countries listed on the [Area Control List](#) and [Sanctions List](#). Furthermore, if the end-use of ATS9870, in part or in its entirety, is related to the development or deployment of weapons of mass destruction, AlazarTech is obliged to apply for an export permit.

ATS9870

1 GS/s 8-Bit PCI Express Digitizer

RoHS Compliance

ATS9870 is fully RoHS compliant, as defined by Directive 2015/863/EU (RoHS 3) of the European Parliament and of the Council of 31 March 2015 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

All manufacturing is done using RoHS-compliant components and lead-free soldering.

EC Conformity

ATS9870 conforms to the following standards:

Electromagnetic Emissions:

CISPR 22:2006/EN 55022:2006 (Class A):
Information Technology Equipment (ITE). Radio disturbance characteristics. Limits and method of measurement.

Electromagnetic Immunity:

CISPR 24:1997/EN 55024:1998 (+A1 +A2):
Information Technology Equipment Immunity characteristics — Limits and methods of measurement.

Safety:

IEC 60950-1:2005: Information technology equipment — Safety — Part 1: General requirements.

IEC 60950-1:2006: Information technology equipment — Safety — Part 1: General requirements.

ATS9870 also follows the provisions of the following directives: 2006/95/EC (Low Voltage Equipment); 2004/108/EC (Electromagnetic Compatibility).

FCC & ICES-003 Compliance

ATS9870 has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15, subpart B of the FCC Rules, and the Canadian Interference-Causing Equipment Standard ICES-003:2004.

ATS9870

1 GS/s 8-Bit PCI Express Digitizer

System Requirements

Personal computer with at least one free x8 or x16 PCI Express (v1.0a, v1.1 or v2.0) slot, 2 GB RAM, 100 MB of free hard disk space, SVGA display adaptor and monitor with at least a 1024 x 768 resolution.

Power Requirements

| | |
|--------|----------------|
| +12 V | 1.2 A, typical |
| +3.3 V | 1.1 A, typical |

Physical

| | |
|--------|--|
| Size | Single slot, half length PCI Express card (4.377 inches x 6.5 inches excluding the connectors protruding from the front panel) |
| Weight | 250 g |

I/O Connectors

| | |
|------------------------------|-----------------------|
| CH A, CH B, TRIG IN, AUX I/O | BNC female connectors |
| ECLK | SMA female connector |

Environmental

| | |
|-----------------------|---------------------------|
| Operating temperature | 0 to 55 degrees Celsius |
| Storage temperature | -20 to 70 degrees Celsius |
| Relative humidity | 5 to 95%, non-condensing |

Acquisition System

| | |
|------------------------------|---|
| Resolution | 8 bits |
| Bandwidth (-3 dB) | |
| DC-coupled, 50 Ω | ± 40 mV range: DC - 200 MHz All other ranges: DC - 450 MHz |
| AC-coupled, 50 Ω | ± 40 mV range: 100 kHz - 200 MHz All other ranges: 100 kHz - 450 MHz |
| Number of channels | 2, simultaneously sampled |
| Maximum sample rate | 1 GS/s |
| Minimum sample rate | 1 KS/s (internal clock) 200 MS/s (external clock) |
| Full scale input ranges | |
| 50 Ω input impedance: | ± 40 mV, ± 100 mV, ± 200 mV, ± 400 mV, ± 1 V, ± 2 V, and ± 4 V, software selectable |
| DC accuracy | $\pm 2\%$ of full scale in all ranges |
| Input coupling | AC or DC, software selectable |
| Input impedance | 50 Ω $\pm 1\%$ |
| Input protection | |
| 50 Ω | ± 4 V (DC + peak AC for CH A and CH B only without external attenuation) |

Acquisition Memory System

| | |
|---------------|---|
| Memory size | 256 MB, 2 GB or 4 GB |
| Record length | Software-selectable with 64-point resolution. Record length must be a minimum of 256 points and maximum of the on-board memory size for single-port memory operation. There is no upper limit on the maximum record length in data |

| | |
|--------------------|---|
| Number of records | streaming mode. Software selectable from a minimum of 1 to a maximum of infinite number of records |
| Pre-trigger depth | From 0 to (Record Length - 128) |
| Post-trigger depth | Record Length - Pre-Trigger Depth |

Timebase System

| | |
|-------------------------|--|
| Timebase options | Internal Clock or External Clock (Optional) |
| Internal sample rates | 1 GS/s, 500 MS/s, 250 MS/s, 100 MS/s, 50 MS/s, 20 MS/s, 10 MS/s, 5 MS/s, 2 MS/s, 1 MS/s, 500 KS/s, 200 KS/s, 100 KS/s, 50 KS/s, 20 KS/s, 10 KS/s, 5 KS/s, 2 KS/s, 1 KS/s |
| Internal clock accuracy | ± 2 ppm |

Dynamic Parameters

Typical values measured on CH A of a randomly selected ATS9870. Input signal was provided by a Marconi 2018A signal generator, followed by a 9-pole, 20 MHz band-pass filter (TTE Q36T-20M-2M-50-720BMF). Input frequency was set at 20 MHz and output amplitude was 708 mV rms, which was approximately 95% of the full scale input. Input was not averaged and bandwidth limiting filter was disabled.

| | |
|-------|-----------|
| SNR | 40.55 dB |
| SINAD | 40.09 dB |
| THD | -54.8 dB |
| SFDR | -52.05 dB |

Note that these dynamic parameters may vary from one unit to another, with input frequency and with the full scale input range selected.

Optional ECLK (External Clock) Input

| | |
|---------------------|--|
| Signal level | ± 200 mV Sine wave or 3.3 V LVTTTL (LVTTTL for Slow External Clock only) |
| Input impedance | 50 Ω |
| Input coupling | AC |
| Maximum frequency | |
| Fast External Clock | 1 GHz with 50% $\pm 5\%$ duty cycle |
| Slow External Clock | 60 MHz |
| Minimum frequency | |
| Fast External Clock | 200 MHz with 50% $\pm 5\%$ duty cycle |
| Slow External Clock | DC |
| Sampling edge | Rising or Falling, software-selectable |
| Maximum amplitude | 2 V_{p-p} |

Optional 10 MHz Reference PLL Input

| | |
|----------------------|------------------------|
| Signal level | ± 200 mV sine wave |
| Input impedance | 50 Ω |
| Input coupling | AC coupled |
| Input Frequency | 10 MHz ± 0.1 MHz |
| Maximum frequency | 10.1 MHz |
| Minimum frequency | 9.9 MHz |
| Sampling clock freq. | 1 GHz |

ATS9870 1 GS/s 8-Bit PCI Express Digitizer

Triggering System

| | |
|----------------------------|---|
| Mode | Edge triggering with hysteresis |
| Comparator type | Digital comparators for internal (CH A, CH B) triggering and analog comparators for TRIG IN (External) triggering |
| Number of trigger engines | 2 |
| Trigger engine combination | Engine J, engine K, J OR K, software selectable |
| Trigger engine source | CH A, CH B, EXT, Software or None, independently software selectable for each of the two Trigger Engines |
| Hysteresis | ±5% of full scale input, typical |
| Trigger sensitivity | ±10% of full scale input range. This implies that the trigger system may not trigger reliably if the input has an amplitude less than ±10% of full scale input range selected |
| Trigger level accuracy | ±5%, typical, of full scale input range of the selected trigger source |
| Bandwidth | 450 MHz |
| Trigger delay | Software selectable from 0 to 9,999,999 sampling clock cycles |
| Trigger timeout | Software selectable with a 10 µs resolution. Maximum settable value is 3,600 seconds. Can also be disabled to wait indefinitely for a trigger event |

TRIG IN (External Trigger) Input

| | |
|-------------------|--|
| Input type | Analog |
| Input impedance | 50 Ω |
| Bandwidth (-3 dB) | |
| DC-coupled | DC - 450 MHz |
| Input range | ±5 V |
| DC accuracy | ±10% of full scale input |
| Input protection | ±8 V (DC + peak AC without external attenuation) |
| Coupling | DC |

Auxiliary I/O (AUX I/O)

| | |
|------------------|--|
| Signal direction | Input or Output, software selectable. Trigger Output by default |
| Output types: | Trigger Output, Busy Output, Software controlled Digital Output |
| Input types: | Trigger Enable Software readable Digital Input |
| Output | |
| Amplitude: | 5 Volt TTL |
| Synchronization: | Synchronized to a clock derived from the ADC sampling clock. Divide-by-8 clock (dual channel mode) or divide-by-16 clock (single channel mode) |
| Input | |
| Amplitude: | 3.3 Volt TTL (5 Volt-compliant) |

Materials Supplied

- ATS9870 PCI Express Card
- ATS9870 Installation Disk (on USB Flash Drive)

Certification and Compliances

- RoHS 3 (Directive 2015/863/EU) Compliance
- CE Marking — EC Conformity
- FCC Part 15 Class A / ICES-003 Class A Compliance

All specifications are subject to change without notice

ORDERING INFORMATION

| | |
|--|-------------|
| ATS9870-256M | ATS9870-002 |
| ATS9870-2G | ATS9870-003 |
| ATS9870-4G | ATS9870-004 |
| ATS9870: External Clock Upgrade | ATS9870-005 |
| ATS9870: SyncBoard 2x | ATS9870-006 |
| ATS9870: SyncBoard 4x | ATS9870-007 |
| ATS9870-256M to 2G Upgrade | ATS9870-010 |
| ATS9870-256M to 4G Upgrade | ATS9870-011 |
| ATS9870-2G to 4G Upgrade | ATS9870-012 |
| ATS9870: SyncBoard 2x-W | ATS9870-020 |
| ATS9870: SyncBoard 3x-W | ATS9870-021 |
| ATS9870: SyncBoard 4x-W | ATS9870-022 |
| ATS9870-256M: One Year Extended Warranty | ATS9870-061 |
| ATS9870-2G: One Year Extended Warranty | ATS9870-062 |
| ATS9870-4G: One Year Extended Warranty | ATS9870-063 |
| Software Development Kit 1 Year Subscription (Supports C/C++, Python, MATLAB, and LabVIEW) | ATS-SDK |
| ATS-GPU-BASE: GPU Streaming Library 1 Year Subscription | ATSGPU-001 |
| ATS-GPU-OCT: Signal Processing Library 1 Year Subscription (requires ATSGPU-001) | ATSGPU-101 |
| ATS-GMA-BASE: GPU Streaming Library 1 Year Subscription | ATSGMA-001 |
| ATS-GMA-OCT: Signal Processing Library 1 Year Subscription (requires ATSGMA-001) | ATSGMA-101 |

DATASHEET REVISION HISTORY

Changes from version 1.6C (Jan 2018) to version 1.6D

| | Section, Page |
|--|---|
| Updated RoHS Compliance to RoHS 3 | Global change |
| Clarified Operating System Support | Features & Feature Table, pg. 1 |
| Added <i>Recommended Motherboards or PCs</i> | Recommended Motherboards or PCs, pg. 2 |
| Correction of trigger engines: changed to J and K (instead of X and Y) | Triggering, pg. 4 |
| Added information on ATS-SDK license | Software Development Kits, pg. 5 |
| Specified 64-bit version for Windows and Linux support | ATS-GPU, pg. 6 |
| Added <i>ATS-GMA</i> section | ATS-GMA, pg. 6 |
| Added list of supported Microsoft Windows versions | Support for Windows, pg. 6 |
| Added Trademark information | pg. 7 |
| Removed Bandwidth Flatness | Acquisition System, pg. 8 |
| Added <i>Acquisition Memory System</i> section | Acquisition Memory System, pg. 8 |
| Removed <i>Amplifier Bypass Mode</i> section | Amplifier Bypass Mode, pg. 8 |
| Added Duty Cycle for fast external clock min. & max. frequencies; Corrected Sampling Edge; Added Maximum Amplitude: $2 V_{p-p}$ | Optional ECLK (External Clock) Input, pg. 8 |
| Added "PLL" to section name for clarity, corrected Input Frequency tolerance, and added Max. and Min. Frequencies | Optional 10 MHz Reference PLL Input, pg. 8 |
| Corrected Trigger Engine Combination | Triggering System, pg. 9 |
| Removed AC-coupled bandwidth and AC coupling. Coupling is DC only. | TRIG IN (External Trigger) Input, pg. 9 |
| Replaced TRIG OUT Output section with Auxiliary I/O (AUX I/O) | Auxiliary I/O (AUX I/O), pg. 9 |
| Added subscription length for ATS-SDK, ATSGPU-001, ATSGPU-101, and added products ATSGMA-001, ATSGMA-101 | Ordering Information, pg. 9 |

Changes from version 1.6B (Oct 2017) to version 1.6C

| | Section, Page |
|---|-------------------------------------|
| Added note about NPT Footers | No Pre-Trigger (NPT) AutoDMA, pg. 3 |
| Added section on External Trigger Input | External Trigger Input, pg. 4 |
| Added CNRC as calibration standard | Calibration, pg. 5 |
| Added -BASE and -OCT to ATS-GPU description for clarity | ATS-GPU, pg. 5 |
| Corrected size of card | Physical, pg. 7 |
| Updated email address | Manufactured By, pg. 8 |

Changes from version 1.6A (Sept 2017) to version 1.6B

| | Section, Page |
|---|------------------------------------|
| Updated description for product ATSGPU-001 & ATSGPU-101 | Ordering Information System, pg. 8 |

Changes from version 1.5A (Jan 2013) to version 1.6A

| | Section, Page |
|--|---|
| Added Python to list of supported languages for Software Development Kit | Features, pg. 1 |
| Added Python & LabVIEW to list of supported languages for ATS-SDK, removed ATS-VI | Overview, pg. 1 |
| Added 2-slot-spacing SyncBoards (-W models) | Master/Slave Systems, pg. 4 |
| Removed Hardware Averaging Firmware (order number ATS9870-014) | Hardware Averaging Firmware, pg. 5 |
| Modified AlazarDSO description | AlazarDSO Software, pg. 5 |
| Modified Software Development Kit description: added Python support, removed ATS-VI | Software Development Kit, pg. 5 |
| Replaced section <i>GPU Based Signal Processing</i> with new <i>ATS-GPU</i> section | ATS-GPU, pg. 6 |
| Changed section title from <i>ATS-Linux</i> to <i>Linux Support</i> , and modified description | Linux Support, pg. 6 |
| Added Export Control Classification information | Export Control Classification, pg. 6 |
| Added section on RoHS compliance | RoHS Compliance, pg. 6 |
| Added section on EC Conformity | EC Conformity, pg. 6 |
| Added section on FCC & ICES-003 Compliance | FCC & ICES-003 Compliance, pg. 6 |
| Updated External Trigger Input Impedance to 50 Ω | TRIG IN (External Trigger) Input, pg. 8 |
| Updated list of Certification and Compliances | Certification and Compliances, pg. 8 |

DATASHEET REVISION HISTORY

Changes from version 1.5A (Jan 2013) to version 1.6A (continued)

Section, Page

Corrected product names for ATS9870-007, ATS9360-011, ATS9360-012, ATS-SDK

Ordering Information, pg. 8

Removed products ATS9870-008, ATS9870-009, ATS9870-013, ATS9870-014,
ATS9870-LIN, ATS-VI, ATS-GPU.

Ordering Information, pg. 8

Added products ATS9870-020, ATS9870-021, ATS9870-022, ATS9870-061,
ATS9870-062, ATS9870-063, ATSGPU-001, ATSGPU-101

Ordering Information, pg. 8
